Deputy Commonwealth Statistician
and Government Statist

© Commonwealth of Australia 1995

PREFACE

South Australian Economic Indicators is a monthly publication which contains the latest available data at the time of preparation for a range of statistical series that have been identified as indicators of economic activity in this State. In a number of cases the figures presented are preliminary and subject to revision in subsequent issues.

Written and graphic commentary have been included for many of the selected series and analysis has been augmented with the calculation of the percentage change from the previous reference period together with the presentation of comparative Australian data.

Time series information has been included to provide a historical perspective on many of the selected indicators. Future issues may be expanded to include further historical data in response to expressed user needs. This product is under continuous review and any suggestions for enhancement will be welcomed.

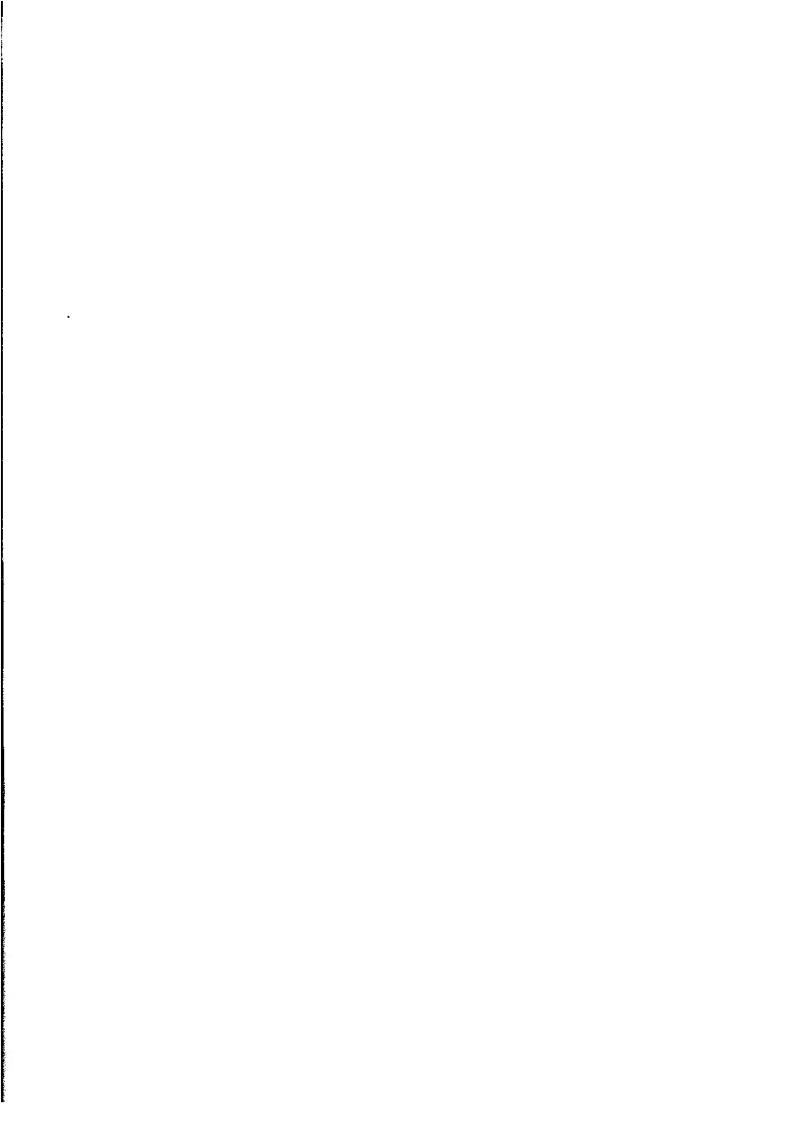

More detailed information on each series, including explanatory and technical notes, can be obtained from other Australian Bureau of Statistics publications or alternative data sources. To assist those seeking further information a source publication for each of the series has been documented in the statistical summary.

This issue includes a special article entitled *Recreation and Leisure*. Future issues will contain further articles on statistical topics which concentrate on longer term trends or other issues pertinent to the South Australian economy.

If you have any inquiries concerning this publication please contact the editor, Brian Moody, telephone (08) 237 7315. All requests for statistical information should be directed to the ABS Information Service, GPO Box 2272 Adelaide SA 5001, telephone (08) 237 7100.

REVIEW

Overview

- The underlying trend estimate of employed persons in South Australia has been increasing since January 1995, with the July 1995 estimate 2.0% above the level of 12 months ago.
- The trend unemployment rate for South Australia has remained unchanged at 9.9% for the six months to July 1995, following a gradual decline over the twelve months to January 1995.
- The June 1995 trend estimate for housing finance commitments (excluding alterations and additions) increased marginally by 0.7% from the May figure but was 21.8% lower than in June 1994.
- The trend estimate for the total number of dwelling units approved in South Australia was 7.6% below the May 1995 figure and 46.0% lower than in June 1994.
- The provisional trend estimate for new motor vehicle registrations in June 1995 was 1.4% above the May estimate. This continued the upward movement which has been evident since August 1994.
- The June 1995 retail trade trend estimate for South Australia was 0.6% higher than the May estimate. This compared with a rise of 0.5% for Australia.
- In the June quarter 1995 the All Groups Consumer Price Index for Adelaide increased by 0.8% which contributed to an annual increase of 3.8%. Both movements were the lowest of the eight capital cities.
- The number of short-term overseas visitor arrivals to South Australia in May 1995 was 50.6% lower than in the previous month and 5.7% lower than in May 1994.
- In 1994-95 the total value of overseas exports of South Australian produced commodities was 2.1% below the level of 1993-94, while the total of value of overseas imports into South Australia rose by 10.5%.

State Accounts

Gross State Product (GSP)

Gross State Product (GSP) trend estimates in 1989-90 prices showed little change (-0.1%) in the March quarter 1995 in contrast to the strong growth in final demand (up 1.4%). The difference in growth between GSP and State Final Demand (SFD) is mainly attributable to a deterioration in the terms of trade *i.e.* a strong growth in imports and a decline in exports (predominantly cereals).

This was the fourth consecutive quarter of negative growth in GSP, and over the year GSP has edged down by 0.8%. South Australia was the only State to record negative growth for both the March quarter and for the twelve month period to March 1995. (The national averages were 0.5% and 4.0% respectively.)

Expressed in current prices, the rate of growth in GSP trend has also weakened with a rise of 0.3% in the March quarter and an increase of 2.8% over the year. (The national averages were 1.2% and 5.8% respectively.)

A major contributing factor in the weakening rate of growth in GSP has been wages, salaries and supplements which grew by 0.1% for the second consecutive quarter, considerably below the increases experienced in the preceding nine quarters. Wages, salaries and supplements grew 1.7% for the twelve months ended March 1995 compared with the national average of 6.8%.

State Final Demand

In contrast to the decline in GSP, growth in State Final Demand (trend in 1989-90 prices) grew strongly by 1.4% in the March quarter 1995. At 8.5% South Australia had the highest growth rate of the States and Territories over the twelve months to March 1995. (The national average was 5.8%).

A major contributor to the annual growth in State Final Demand was private gross fixed capital expenditure on equipment, which more than doubled over the year.

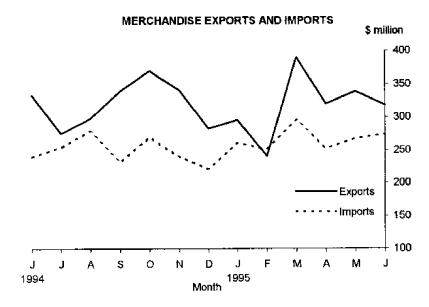

Private final consumption expenditure remained strong with a 1.3% increase in the March quarter and 5.0% for the 12 months ended March (this was in line with the national average of 5.1%). In contrast, government final consumption expenditure continued to decline, falling 3.4% in the March quarter to a level 4.5% below that of a year ago.

International Accounts

Exports

Overseas exports of South Australian produced commodities in June 1995 were valued at \$318.3 million. This was a decrease of 6.0% from the previous month, and contributed to a 2.1% fall in the value of exports in 1994-95 from the previous year. Japan was the leading destination, taking 17.8% of the total value of goods exported.

The leading export commodity group in June was petroleum and petroleum products which accounted for 12.1% of the value of South Australian exports. This was followed by cereals and cereal preparations (11.6%), and metals and manufactures (11.2%). The most prominent industry of origin was manufactured food, beverages and tobacco, which contributed 22.7% of the total value in June 1995.

In 1994-95 the total of value of overseas imports into South Australia (compiled from import documents lodged in South Australia) rose by 10.5% to \$3,097.6 million from the 1993-94 aggregate. Imports in June 1995 amounted to \$273.5 million. This was a rise of 2.3% over the May figure and 14.1% above June 1994.

Imports

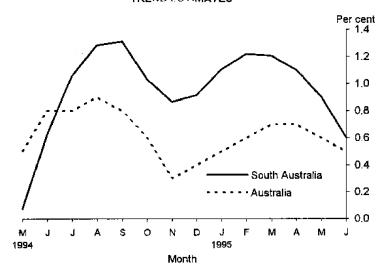

The leading commodity group was machinery (\$63.9 million) which accounted for 23.4% of the total value. This was an increase of 21.4% over the value of machinery imported in May and 57.2% greater than the June 1994 figure.

Consumption and Investment

Retail Turnover

The retail trade trend estimate indicates that retail sales in South Australia increased by 0.6% in June 1995 compared with an Australian rise of 0.5%. As can be seen from the following graph, the strong growth in trend estimates, evident since mid 1994, has moderated in recent months.

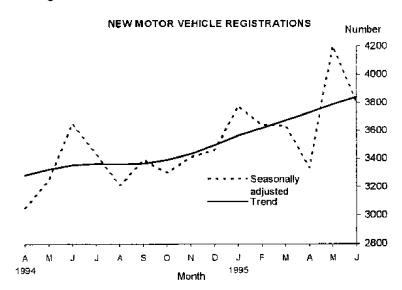

RETAIL TURNOVER PERCENTAGE CHANGE FROM PREVIOUS MONTH TREND ESTIMATES

In seasonally adjusted terms retail trade in June 1995 increased 0.3% from May 1995. In original terms South Australian retail turnover amounted to \$717.3 million in June 1995, an increase of 14.8 per cent from June 1994.

New Motor Vehicle Registrations

The provisional trend estimate for new motor vehicle registrations in June 1995 was 1.4% above the May estimate. This continued the upward movement which has been evident since August 1994. The seasonally adjusted estimate for June 1995 was 9.6% below the May 1995 estimate but 4.1% higher than June 1994.

In original terms there were 4,182 new motor vehicles registered in June 1995, a decrease of 3.7% from May 1995 but an increase of 4.0% from June 1994. For new passenger vehicles only, the leading makes registered in June 1995 were Holden (840 vehicles), Ford (765), Mitsubishi (500), Toyota (435) and Hyundai (176).

Tourist Accommodation

When the March quarter 1995 is compared with the March quarter 1994, caravan capacity available in South Australia increased by 0.9% from 24,142 to 24.351 powered and unpowered sites, and cabins. Site nights occupied increased by 2.1% from 656,243 to 669,770 and the site occupancy rate rose from 30.2% to 30.6%. Accommodation takings rose by 4.8% from \$8.2 million to \$8.6 million with the average takings per site night occupied rising from \$12 to \$13.

Private New Capital Expenditure

The trend estimate (in scasonally adjusted current price terms) for private new capital expenditure in South Australia for the March quarter 1995 was \$563 million. The rise of 3.0% from the previous quarter followed rises of 9.5%, 17.7% and 15.2% in the December, September and June 1994 quarters respectively and is an indicator of strong growth over this period. However, the last quarter has seen a flattening in the series, and the South Australian total for the quarter represented only 6.4% of the national figure.

Private new capital expenditure in original terms for the March quarter 1995 was \$483 million, a decrease of 24.0% from the December 1994 quarter. Buildings and structures accounted for \$85 million, and equipment, plant and machinery \$399 million.

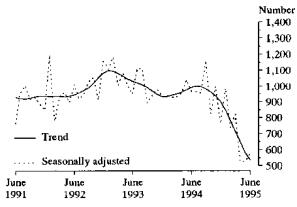

Production

Dwelling Approvals

The trend estimate for the total number of dwelling units approved in South Australia continued its downward movement in June 1995. The estimate of 537 represented a 7.6% decrease from May 1995 and a 46.0% fall from the June 1994 estimate. The original number of dwelling units approved in June 1995 was 646, an increase of 9.7% from the previous month. Nationally the trend for the total number of dwelling units approved continued its downward movement, registering a 30% decrease from the June 1994 estimate.

The total number of dwelling units approved in 1994-95 for South Australia was 9,672, a decrease of 17.1% from 11,777 in 1993-94.

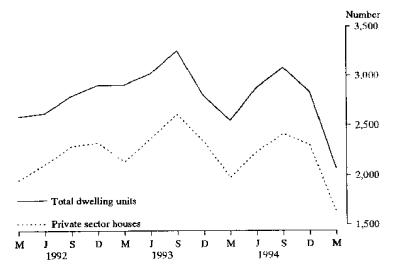

DWELLING UNITS APPROVED

Dwelling Commencements

From the Building Activity Survey, it was estimated that 2,064 dwelling units were commenced in South Australia during the March quarter 1995, the lowest since the December quarter 1987. The latest figure represented a fall of 770 dwelling units (27.2%) from the previous quarter and can be compared with a 22.9% fall nationally. The latest figure for South Australia was 19.0% below the total for the March quarter 1994 while the national decrease over the twelve month period was 13.6%.

NEW DWELLING UNITS COMMENCED

Value of Non-residential Building Approvals Non-residential building approvals for South Australia for June 1995 were valued at \$47.9 million. Three-quarters of this was private sector work. In June 1995 South Australia contributed 4.6% to the total value of Australian non-residential building approvals of \$1,164.4 million.

In 1994-95 the value of non-residential building approvals for South Australia was \$493.2 million, a 31.4% increase from the 1993-94 aggregate of \$375.2 million.

Value of Total Building Activity

The total value of building work commenced during the March quarter 1995 fell by \$73.8 million or 20.9% (16.4% nationally) from the previous quarter to \$278.6 million, the lowest for 8 years. Most of the decrease was accounted for by a fall of \$60.5 million in private sector residential commencements. Building commencements in South Australia comprised 4.6% of the national total in the March quarter.

The total value of building work done during the March quarter 1995 was \$314.3 million, also the lowest for 8 years. It represents a decline of \$70.4 million (18.3%) from the previous quarter and compares with a 17.6% fall nationally. Compared with the March quarter 1994, the latest figure for South Australia represents a 5.2% decrease in the value of total building work done, while the corresponding national movement was a 6.8% increase.

Building work yet to be done was valued at \$280.3 million at the end of March 1995, a fall of 8.5% from the previous quarter and the lowest since the September quarter 1984. Compared to a year earlier, work yet to be done was down 17.0% in South Australia but up 6.8% nationally. Work yet to be done in South Australia comprised only 3.1% of the national figure in the March quarter 1995.

Value of Engineering Construction

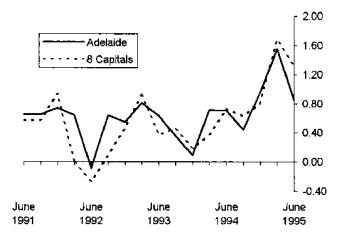

In the March quarter 1995, engineering construction work done in South Australia fell by 8.4% (8.7% nationally) to \$156.8 million. The latest figure for South Australia was 13.8% below the level of a year earlier, and compares with a 1.4% decrease nationally.

Prices

Consumer Price Index

In the June quarter 1995 the all groups Consumer Price Index increased by 1.3% nationally and this contributed to an annual increase of 4.5%. For Adelaide, the quarterly movement was 0.8% while the annual figure was 3.8%. Both of these movements were the lowest recorded of the eight capital cities.

CONSUMER PRICE INDEX Percentage change

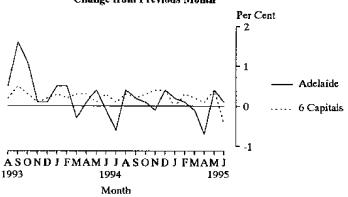

The average supermarket price of a 1 litre carton of milk has again risen, and for the June quarter its price of \$1.10 represents an increase of 5.8% over the March quarter and a 13.4% increase from the June quarter 1994. At an average of \$4.07 per kg, the price of tomatoes for the June quarter 1995 has increased by 21.5% (\$3.35 kg) from the March quarter and over the twelve months from the June quarter 1994 (\$2.60 kg) the increase was 56.5%. It would appear that the price of coffee has stabilised with the average price of a 150g jar peaking at \$5.72 in March quarter 1995, but easing to \$5.46 in the June quarter. Nevertheless, this latest price reflects an increase of 42.2% from the corresponding period in 1994. In the June quarter 1994 the average price of a litre of unleaded petrol was 69.6c and by the June quarter 1995 it had increased minimally to 69.8c. However, because of increased wholesale prices, higher government excise and a reduction in the level of discounting, it is expected that the price will be somewhat higher in the September quarter.

House Building Materials

Over the twelve months to June 1995 Adelaide recorded the lowest risc (0.4%) of all the capital cities in the Price Index of Materials Used in House Building. Hobart recorded the largest rise (4.4%), followed by Perth (3.5%) and Sydney (3.0%). The weighted average of the six capitals rose 2.4% over the twelve month period. In June 1995 falls from the previous month were recorded for Melbourne (1.3%), Brisbane (0.6%), Perth and Hobart (both 0.1%), while Adelaide recorded a rise of 0.1% and Sydney a rise of 0.6%. Overall there was a 0.4% decrease in the weighted average of the six State capitals.

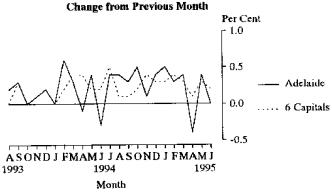

MATERIALS USED IN HOUSE BUILDING Change from Previous Month

Non-house Building Materials

Rises ranging from 2.0% (Melbourne) to 3.7% (Brisbane) were recorded in the Price Index of Materials Used in Building Other Than House Building over the twelve months to June 1995. The overall increase in the weighted average of the six State capitals was 2.9%. Adelaide recorded a rise of 3.1% over this period. Changes in June 1995 from the previous month ranged from -0.1% in Melbourne, to 0.4% in Perth and Hobart. No price movement was recorded for Adelaide, while the weighted average of the six State capitals exhibited a 0.2% increase.

House Prices

Nationally, prices for established houses increased by 1.0% while project home prices decreased by 0.3% between the December quarter 1994 and the March quarter 1995. Over the same period, prices of established houses in Adelaide increased by 0.7%, while project home prices fell by 0.5%. On an annual basis, the March quarter 1995 prices for established houses rose by 3.3% nationally while the increase for project homes was 2.2%. For Adelaide the increase for both established houses and project homes was 1.6%.

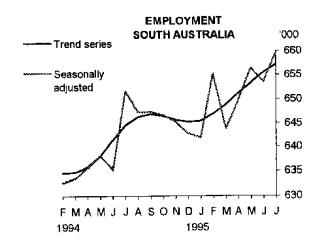

Labour Force and Demography

Population

The estimated resident population of South Australia at 31 December 1994 was 1,471,871, an increase of 0.06% (916) over the September quarter, and 0.35% higher than December 1993. This was well below the national annual growth rate of 1.1%. The low growth rate in this State was mainly attributable to a net outflow of 4,741 persons in interstate migration over the twelve month period.

Employment

The underlying trend estimate of employed persons in South Australia has been increasing since January 1995. The July 1995 estimate (657,200) was 2.0% higher than the level of 12 months ago.

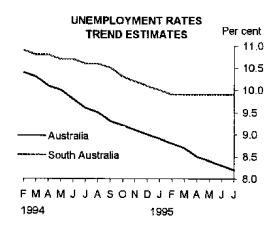

The underlying trend estimate of employed persons in Australia has been increasing since February 1993, reaching 8,275,900 in July 1995. Over the past 12 months, full-time and part-time employment have increased by 3.6% and 6.6% respectively.

Unemployment

The provisional trend estimate for the unemployment rate in Australia was 8.2% in July 1995. This continued the general downward movement evident since January 1993.

The trend unemployment rate for South Australia has remained at 9.9% over the six months to July 1995, following a gradual decline over the twelve months to January 1995. Between July 1994 and July 1995, the trend unemployment rate for females decreased from 10.2 to 8.6%, while the rate for males remained at 10.9%.

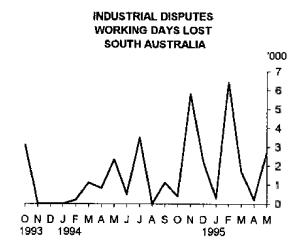

Overtime

Industrial Disputes

The proportion of employees who worked overtime in South Australia in May 1995 was 16.7% compared with 16.3% in February 1995.

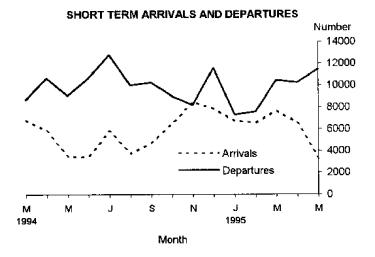

There were 2,700 working days lost through industrial disputes in South Australia during May 1995. At 3.1% of the Australian total (87,500 working days), South Australia experienced a relatively low level of disputation.

In the twelve months to May 1995, 24,700 working days were lost through industrial disputation in South Australia.

Short-term Overseas Visitor Arrivals

There were 3,264 short-term overseas visitor arrivals to South Australia in May 1995. This was a fall of 50.6% from the number of visitors in the previous month and 5.7% lower than in May 1994.

Short-term Resident Departures

Short term departures of South Australian residents in May 1995 totalled 11,449. This number was 12.0% higher than the April figure, and 26.9% higher than the number of short term departures of residents in May 1994.

Incomes

Average Weekly Earnings

Average weekly ordinary time carnings of full-time adult employees in South Australia decreased from \$619.90 in February 1995 to \$611.70 in May 1995. Male full-time ordinary time earnings fell from \$648.40 in February 1995 to \$635.10 in May 1995. Over the same period the comparable level for females increased from \$560.80 to \$563.90.

Between February 1995 and May 1995, average weekly total earnings of all employees in South Australia decreased from \$527.90 to \$513.30.

The trend estimate of average weekly ordinary time earnings of full-time adult employees in South Australia rose from \$611.10 in February 1995 to \$616.70 in May 1995. Male full-time ordinary time earnings increased from \$636.60 in February 1995 to \$643.40 in May 1995. Over the same period, the comparable level for females increased from \$560.80 to \$563.40.

Between February 1995 and May 1995, the trend estimate of average weekly total earnings of all employees in South Australia increased from \$515.50 to \$518.00.

Since it is an average of earnings across all employees, changes in average weekly earnings may occur through changes in employment as well as changes in pay levels.

Award Rates of Pay

Over the 12 months to June 1995, the weekly award rates of pay index for full-time employees in South Australia increased by 1.1%.

For full-time adult male employees, the largest annual movement of the index occurred in the recreation, personal and other services industry (an increase of 2.5% since June 1994).

For full-time adult female employees, the largest annual movement of the index occurred in the recreation, personal and other services industry (an increase of 2.1% since June 1994).

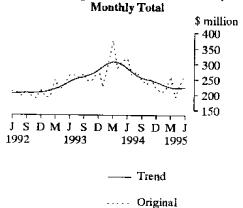

Financial Markets

Housing Finance

Total housing finance commitments for owner occupied dwellings (original figures including alterations and additions) increased by \$33.7 million (13.2%) to \$289.1 million during the month of June.

Financing commitments for the purchase of established dwellings, the largest category, rose by \$15.4 million (9.8%) to \$172.2 million. Financing commitments for construction of dwellings decreased marginally by \$0.5 million (1.6%) to \$31.1 million, 42.8% below the June 1994 figure of \$54.4 million. Purchase of newly erected dwellings increased by \$2.9 million (18.2%) to \$18.9 million.

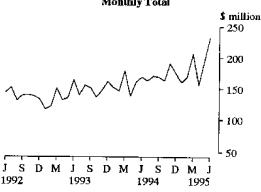

Refinancing rose strongly during the month (up 41.1%) to reach \$45.1 million (15.6% of total housing finance commitments) and alterations and additions rose 14.8% to \$21.7 million (7.5% of the total).

The trend estimate for total value of commitments (excluding alterations and additions) increased marginally by \$1.6 million (0.7%) to \$223.6 million when compared with the previous month but fell by \$62.3 million (21.8%) compared with June last year.

Personal Finance

During June 1995 personal finance commitments rose by \$39.9 million (20.6%) to \$233.5 million. This was the highest figure recorded over the past decade. The bulk of the month's increase was attributable to the near doubling of unsecured commitments under revolving credit facilities.

Sales of used motor vehicles and station wagons, the largest category under fixed loan commitments, increased by \$2.1 million (5.4%) to \$41.6 million during the month compared with \$37.5 million in June 1994. Sales of new motor vehicles and station wagons decreased during the month with a fall of \$1.0 million (6.5%) to \$13.9 million.

Total personal finance commitments under fixed loan commitments increased marginally by \$2.6 million (2.0%) to \$130.6 million in June 1995 compared with \$125.0 million in June last year. Total personal finance commitments under revolving credit commitments increased by \$37.4 million (57.0%) to \$102.9 million, the highest monthly figure of the past decade.

Commercial Finance

Total commercial finance commitments decreased marginally by \$32.1 million (5.4%) to \$556.7 million in June 1995, \$38.6 million (6.5%) below the corresponding month last year. Finance commitments under fixed loan facilities increased while commitments under revolving credit facilities decreased.

Commercial finance commitments under fixed loan facilities increased by \$40.5 million (13.2%) to \$346.9 million, the highest June figure since 1991. Large increases were recorded for the categories of property and business services, recreation, personal and other services, and other industries, while community services fell back from the high May figure.

Commitments under revolving credit facilities fell by \$72.6 million (25.7%) to \$209.8 million. Agriculture, forestry, fishing and hunting, wholesale trade and other industries fell back following substantial increases in May. Manufacturing, construction, retail trade and property and business services had considerable increases during June.

Lease Finance

In June 1995 the value of goods under new finance lease commitments increased by \$5.7 million (21.9%) to \$31.7 million from the May 1995 figure but was down \$4.4 million (12.1%) from June 1994.

Lease commitments for new motor vehicles and station wagons not subject to depreciation, the largest category, increased by \$1.0 million (16.6%) to \$7.0 million, 6.2% below June 1994. Used motor vehicles and station wagons not subject to depreciation increased by \$0.7 million (22.8%) to \$3.6 million. New motor vehicles subject to depreciation almost doubled during the month, up by \$1.8 million to a total of \$3.7 million (30.0% above June 1994).

New finance lease commitments for manufacturing equipment, new and used heavy trucks and other transport equipment also recorded very large increases.

Forward Outlook

Composite Leading Indicator

The Composite Leading Indicator (CLI) is a single time series produced by aggregating eight individual economic indicators, and has been developed by the ABS as an experimental series to supplement existing forms of economic analysis and modelling.

The CLI summarises the early signals contained in a selection of economic indicators and is designed to help in the detection of turning points between successive expansions and contractions of economic activity but does not attempt to forecast the level of economic activity.

The main features of the Australian March quarter 1995 data were:

- confirmation of the narrowing in the deviation of GDP(A) from its long-term trend (predicted by the December 1994 CLI);
- a continuation of the downward movement in the CLI evident since the June quarter 1994 peak, and the acceleration in this downward movement (-0.01% in the September quarter 1994, -0.32% in the December quarter 1994 and -0.58% in the March quarter 1995);
- an increasing unanimity among CLI components as the downward movement accelerates; seven of the eight components made negative contributions to the CLI, compared with six in the December quarter 1994 (revised), and three in the September quarter (revised).

The quarterly data are released in more detail in the Australian Economic Indicators (1350.0). The CLI was the topic of the Focus article in the September 1993 edition of South Australian Economic Indicators (1307.4).

Australian Business Expectations

Surveys of business expectations have been a feature of the economic intelligence available to decision makers for a number of years. The main output from these surveys has been a qualitative indicator which provides the net proportion of businesses predicting a rise or fall in future business conditions. Further details about these surveys which are conducted quarterly by the ABS are available in *Australian Business Expectations* (1250.0), the September 1994 edition of *Australian Economic Indicators* (1350.0) and the May 1994 edition of *South Australian Economic Indicators* (1307.4).

AUSTRALIAN BUSINESS EXPECTATIONS SOUTH AUSTRALIA AND AUSTRALIA SALES OF GOODS AND SERVICES EXPECTED PERCENTAGE AGGREGATE CHANGE

-	Short term	n(a)	Medium term(b)		
Reference Period	South Australia	Australia	South Australia	Australia	
1994	2.2	2.3	1.8	4.1

June quarter	0.2	1.3	0.8	2.3	

(a) Short term is the following quarter. (b) Medium term is the same quarter in the following year.

Short term

Businesses in South Australia expected a rise of 0.2% in sales in the September quarter compared with the June quarter 1995 while the national expectation was a 1.3% increase.

Medium term

Businesses in South Australia expected a lower growth in sales (0.8%) than the national expectation of 2.3% for the June quarter 1996 compared with the June quarter 1995.

FOCUS

Recreation and Leisure

This article was contributed by Glenn Hamlyn, National Culture and Recreation Statistics Unit, Australian Bureau of Statistics, Adelaide

Introduction

In 1993-94 total outlays by all levels of government on recreational facilities and services amounted to almost \$2 billion. In 1993-94, over \$8 billion (2.1%) of Australia's gross domestic product (GDP) was contributed by cultural and recreational services. In 1988-89 the average Adelaide household spent \$54 per week on recreation, which was 9.2% of the average weekly household income at that time.

The Australian Bureau of Statistics (ABS) has a unit located in Adelaide called the National Culture and Recreation Statistics Unit (NCRSU) which has as its focus defining the culture and recreation industries and developing statistics to measure those fields. The role of the NCRSU includes development of statistical classifications and coordination of ABS collection activities related to sport and recreation and, where possible, statistical activities of other organisations.

The Office of Recreation Development (part of the Department of Sport, Environment and Territories) has been the catalyst for this focus. They have coordinated a program designed to define the scope of the industry and identify statistical needs. Their adopted approach distinguishes the main components of the industry as:

- organised sport;
- · active recreation;
- · amusement and passive recreation;
- gambling; and
- · services to sport and recreation.

In addition to defining the industry, the program involves the gathering of available data, and the funding of additional statistical collections to obtain more data on the sport and recreation industry. A central database of information on the sport and recreation industry is held by the South Australian Department of Recreation and Sport and by the ABS.

Recreation Activities

Participation in organised and social sporting activities is measured quarterly in a national household survey, the Population Survey Monitor. In 1993-94 this Survey asked people about their sporting or physical recreation activities, and whether these activities were organised by a club or association. On this basis the Survey showed that the most popular organised sport was golf, with 384,600 people participating (3% of the population). Considerable numbers also participated in social golf (i.e. not organised by a club or association).

The most popular organised sports for men were golf, outdoor cricket, soccer, basketball and Australian rules football. For women, the most popular organised activities were netball, tennis, aerobics and golf.

In addition to organised sports, many people are involved in social sport and other recreational activities. The numbers in the following table should be viewed as preliminary. Changes to the Survey for the 1994-95 collection year are expected to result in improved data.

PEOPLE AGED 15 AND OVER WHO PARTICIPATED IN ORGANISED SPORT, AUSTRALIA, 1993-94 (1000)

Men	1	Women				
Type of sport	Participants	Type of sport	Participants			
Golf	303.9	Netball (includes indoor)	287.1

Indoor cricket	91.6	Squash	46.3			
Squash	78,5	Touch football	39.2			

Source. Population Survey Monitor, 1993-94.

The Population Survey Monitor has some limitations for State data as the sample size within each State is relatively small. In order to obtain State data, a separate survey in October 1995 will ask 3,500 households throughout South Australia which sporting or physical recreation activities they have participated in over the previous twelve months, the time spent on each activity, and expenditure incurred. This survey will provide the first detailed study of participation in sport and recreation activities within South Australia, although smaller studies have been undertaken in the past, including a Beach Usage Survey of Adelaide residents in May 1986, and a Bicycle Usage Survey in October 1984.

Information about the numbers of people attending culture and leisure venues (including libraries, art galleries, museums, botanic gardens etc.) and attendance at sporting events by type of sport will be available later this year, from a national survey conducted in March 1995.

With regard to industry statistics, approximately 8,000 businesses within the sport and recreation industry which employ staff, such as sporting associations, clubs, horse and dog trainers, racing clubs, owners of sporting facilities, recreation organisations, casinos and lottery authorities, and local government councils will shortly be surveyed to obtain statistics on the economic value of the industry. Data to be collected include income and expense items, employment and facilities. Results from this survey are expected to be available in late 1996.

Time Use Survey

In February 1994 the ABS published the results of the first nation-wide Time Use Survey in Australia which was conducted in 1992. The study showed how people allocated their time to a range of pursuits including recreational, cultural, religious and leisure activities.

Respondents were asked to complete a diary describing their activities for two days. They were required to enter details of their main activity as well as any other activity they were engaged in at the same time (e.g. cooking and listening to the radio at the same time).

The daily allocation of time was classified into a number of categories within the following ten broad groups: labour force; domestic; child care; purchasing; personal, education; community; social life and entertainment; active leisure; and passive leisure.

This survey found that Australians spent the largest part of their day (43%) on personal care (which included sleeping), followed by employment (14%), passive leisure (13%), domestic activities (10%), social life and entertainment (7%), active leisure (4%), purchasing (3%), child care, education and community (all 2%). The most popular leisure activity was watching television and videos, with the average person spending 108 minutes per day on this activity.

AVERAGE TIME SPENT ON MAIN LEISURE ACTIVITIES AUSTRALIA, 1992 (MINUTES PER DAY)

Activity	Males	Females	Persons
Social life and entertainment	92	108	100
Socialising	70	84	77
Visiting entertainment and cultural venues	4	5	4
Sports events	3	2	2
Active leisure	56	46	51
Sport, exercise and outdoor activities	35	20	27
Games, cards, etc.	6	6	6
Hobbies, arts, crafts etc.	4	11	8
Holiday travel, driving for pleasure	5	5	5
Passive leisure	194	186	190

Voluntary work for sport and outdoor activities	114	112	113
Other sport, exercise and outdoor activities	122	45	115
Games, cards, etc.	84	80	82
Card, board, other parlour, pinball	79	69	74
Computer games, computing as leisure activity	94	74	87
Games of chance, gambling	66	96	80

National Health Survey

A National Health Survey in 1989-90 found that 63% of South Australians aged 15 and over had exercised in the two weeks prior to the interview. This was the lowest level of all States, but South Australia also has an older population than the Australian average, which may partly explain the reason. Forty-four per cent of South Australians had walked for exercise or recreation. The survey also found that current smokers are less likely to exercise than ex-smokers or those who never smoked.

Further Reference

Further information on the Time Use Survey appears in the ABS publication, *How Australians Use Their Time*, 1992 (4153.0). Inquiries on the availability of culture/leisure statistics should be directed to Roger Mableson, telephone (08) 273 7449.

ABS PUBLICATIONS AND PRODUCTS

Statistics collected by the ABS are generally made available to clients in published form. Some, including those not published, are available in one or more of the following forms: microfiche, magnetic tape, computer printout, CD, floppy disk, photocopy and clerically extracted tabulation.

Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues on Tuesdays and Fridays a Release Advice (1105.0) which lists publications to be released within the next few days. The Catalogue and Publications Advice are available from any ABS Office.

To receive ABS publications on a regular basis contact the ABS *Publication Mailing Service* on (008) 02 0608.

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office.

The ABS Information Consultancy Service has specialist staff to assist and advise clients with their statistical inquiries. For more detailed information about

these services call at the ABS, 55 Curric Street. Adelaide, telephone the Information Officer on (08) 237 7100, or write to Information Service. ABS, GPO Box 2272, Adelaide 5001.

The ABS also provides a *Statistical Consultancy Service*, for expert assistance in survey, sample and questionnaire design, data collection, processing and analysis, and statistical modelling. For more information contact Gary Niedorfer, telephone (08) 237 7379.
